

# TERRA NOVA VOYAGER SUPERLITE £330

**It's good** This is a lightened version of the Voyager, a classic 3-pole geodesic that defines its class. By lightening the fabrics to those used in the brand's Laser range, Terra Nova has reduced the weight by 400g. The beauty of the tent is that you still get an inner and outer, a three-pole geodesic design, a superb porch and a front entrance with double zips for venting. The geodesic design is incredibly stable. The pegs are the wire skewer type which do not hurt your hands and are made from titanium to keep the weight down.

**But** The outer doors do not get external stormflaps and the zips are particularly small, so you will need to treat them with a little care. To save weight the poles are held in place with clips rather than sleeves. Also this is an inner-pitched-first design, so it's not ideal for erecting in heavy rain.

**Buy it if** You want a superlight version of a proper backpacking tent with the space, stability and features that make camping comfortable.

## VITAL STATS

**Design** 3-pole geodesic  
**Poles** shock-corded alloy  
**Inner** polyester ripstop
