Description

For over 25 years the Voyager tent has been a long term favourite for backpackers and trekkers. Its semi-geodesic design provides good stability and plenty of space to accommodate 2 people and their kit. The tent is designed for the backpacker or traveller going on medium to long duration trips and looking for spacious lightweight kit.

â–° Rated 4 season trekking, so suitable for year round backpacking. It's also a good tent for Duke of Edinburgh's Award expeditions in more exposed areas

â–° The semi-geodesic design (the poles cross over at 3 points) and inner first pitching also make the Voyager more stable and quieter than a tunnel tent in windy conditions

â–° It's free-standing which makes it ideal for camping where the ground is less firm, as it doesn't rely on guy lines and pegs to support its main structure

â–° The Voyager is a perfect tent for wild camping as well as campsite use

â–° DAC NFL colour coded poles make locating the correct pole sleeves and pole feet tapes easy and the tent quick to pitch

â–° The inner door has a full midge proof mesh panel and full solid door behind to provide unlimited options for ventilation depending on weather conditions

â–° Tried and tested Terra Nova fabrics are used to provide lightweight performance and good durability

â–° The Watershed nylon ripstop flysheet and Waterbloc nylon groundsheet are fully seam sealed to offer complete protection from the elements all year round

â–° Dyneema reflective guylines add more stability and the Voyager comes with extra guyline attachment points should additional guylines be required. Dyneema guyrope is three times as strong as standard guyrope of the same weight and has very low stretch for stability in all conditions

A Footprint which covers the area under the inner and porch is designed to prolong the life of the tent and help keep it clean. This can be purchased [here](#)
