FABRIC TECHNOLOGY

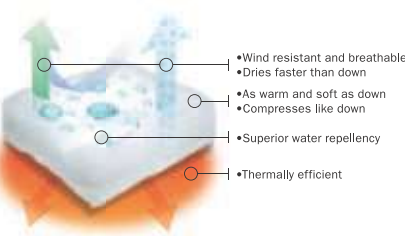

Pittards® Oiltac Technology

Specialised polymers are incorporated into the leather structure, which promote contact adhesion and significantly improve the ability to grip in all conditions. Once incorporated into the leather, the specialised polymer maintains a reservoir which rises to the surface when it is needed to replenish and maintain grip. Pittards® Oiltac has been designed to limit water uptake into the fibre structure, thus guaranteeing excellent tactile sensitivity under the most adverse conditions.

PrimaLoft® Gold Insulation is the go-to choice for adventurers looking for protection in extreme conditions. Microfibers trap body heat to make this the most thermally-efficient synthetic insulation available, with water-repellency that insulates even in the wettest weather – maintaining 98% of warmth when wet.

Kevlar®

Kevlar® belongs to the Aramid family of yarns, renowned for their high strength and low weight properties. With a strength to weight ratio 5 times greater than steel and outstanding abrasion resistance our Kevlar® fabric is designed for use in the most demanding environments.

Polypropylene

Polypropylene is very durable, it also has the lowest thermal conductivity of all fibres and the lowest moisture regain coefficient. This means it is very warm and high wicking, making it ideal for liner and mid layers. extremities® has developed exclusive polypropylene fabrics and knits for its range.

Different weights of PrimaLoft® Gold Insulation explained

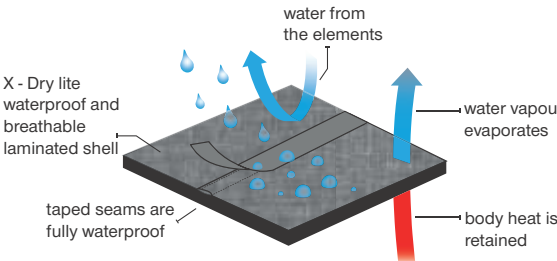

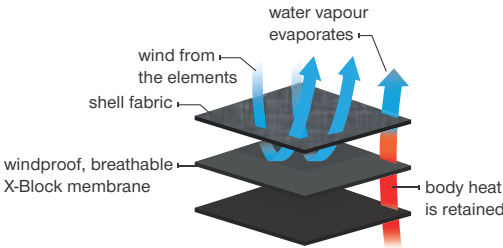

We use different weights of PrimaLoft® Gold Insulation depending on the conditions the products are designed for:

- 3oz: The lightest and most flexible insulation we use, for maximum dexterity
- 5oz: A standard single layer insulation, suitable for most conditions
- 6oz: A double layer of 3oz insulation
- 10oz: A double layer of 5oz insulation for severe conditions
- 13oz: A triple layer of insulation, for protection in the most extreme conditions

PrimaLoft® Silver Performance Yarn

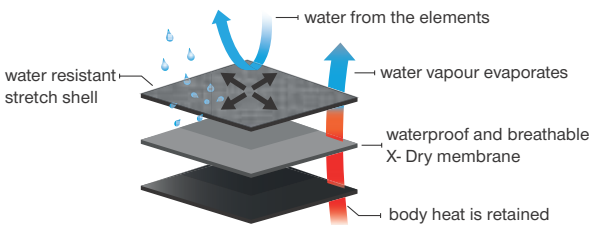

The hydrophobic properties of PrimaLoft® fibres and hydrophilic properties of Merino wool combine to form a dynamic moisture management system that transfers moisture away from the skin and pushes it out through the surface, keeping you dry and comfortable. The combination of technology and nature results in a yarn blend that is durable and dries quickly, with minimal shrinkage.

FABRIC TECHNOLOGY

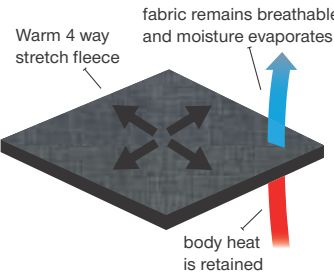

Merino Wool

Merino Wool has good thermal, wicking and antibacterial properties. It absorbs up to a third of its weight in water but still retains warmth when wet. Merino Wool is one of the finest wools making it suitable for people with more sensitive skin, fibres with a thickness of only 20 microns are used in extremities® products.

Power Liner

Power Liner provides a high quality knit, great thermal properties and outstanding moisture management characteristics. Its high stretch, close fitting performance is combined with a soft fleecy back for maximum comfort. A great value option for gloves, hats and neck tubes.

FABRIC TECHNOLOGY

POLARTEC® POWER STRETCH® PRO™
4 times more wind resistant than traditional fleece and provides extra warmth without weight, as well as being water repellent and breathable.

POLARTEC® POWER STRETCH® fabric has 4-way stretch properties - hugging the skin to keeping you dry by wicking sweat away. It is also highly breathable, and wind resistant.

POLARTEC® POWER DRY® keeps you dry when you sweat by picking up moisture and moving it away from the skin. It's also highly breathable, quick drying, and comfortable.
