Terra Nova Equipment has a long history of producing some of the world’s best outdoor gear, gear which is tried and tested in our laboratory and in some of the most extreme environments on the planet. Our ‘Best in Class’ design ethos drives an ambition to develop and use some of the best components and materials available. We are leaders in materials research and innovation, continuously looking to create and use fabrics that are unique in the outdoor industry. The result is award winning products which enable outdoor enthusiasts to achieve their goals. Terra Nova® is the brand of choice for most outdoor professionals across the globe. The Terra Nova® brand has its heritage in mountain tents including the iconic Quasar. However, the last 15 years has seen it established as the leader in the design and development of extremely lightweight gear, including the lightest tents in the world, packs and sleeping bags.

Photographer: Nigel Vardy

Wild Country® camping products from Terra Nova Equipment are designed for customers seeking the perfect combination of reliability, simplicity of use and great value. Taking some of the design and quality standards from the Terra Nova® brand, products are used by everyone from the serious user to first time campers and families to escape into the outdoors. The Zonda range of inflatable tents launched in 2020, has been expanded further for 2021.

THE JOURNEY

Innovation At Heart

Continuous pioneering development of award winning products

UK Design & Production

Designed and selected manufacturing at our Derbyshire factory since the 1980s

UK After Sales

Repair, advice and bespoke expertise all from our British headquarters since the 1980s

Terra Nova® Tent Range Explained

The Terra Nova® tent range is divided into 5 series:

ULTRA Series

This series comprises cutting edge products which push development boundaries with the latest technologies. Created using state of the art construction methods and designs and tailored to provide the lightest solutions possible.

Target User: The outdoor athlete wanting the latest technology and lightest weight kit so they can achieve their best performance.

Use: Adventure racing, mountain marathons, 1-2 night 3 season backpacking trips.

Superlight Series

Designed to create extremely lightweight products balanced with strength and durability. Achieved using both 7 and 10 denier nylon 6.6 ripstop flysheet fabrics with a maximum tear strength of 6kg.

Target User: The outdoor enthusiast wanting extremely lightweight kit for short to medium length trips, events and activities.

Use: Mountain marathons, 3 season backpacking.

Lightweight Series

This series includes designs which have become the industry blueprint for lightweight tent design, winning numerous awards and used worldwide. Models offer a good balance of durability and low weight using a 20 denier nylon ripstop flysheet fabric.

Target User: The outdoor enthusiast looking for a good balance of weight, durability and space.

Use: Medium duration 3-4 season backpacking trips, trekking. Activities where low weight is still important.

Classic Series

The tents provide tried and tested lightweight performance. This series includes spacious models suitable for year round use.

Target User: Those looking for a good all-round lightweight tent that can be used across a whole range of activities throughout the year. Prepared to accept a slightly heavier weight (than tents in the Lightweight Series) for more space and strength.

Use: 4 season trekking and backpacking. Longer duration trips.

UK Made Expedition Series

Using our most durable flysheet fabrics and made in the UK, this series gives peace of mind to those who may experience severe weather when travelling to the most remote parts of the world.

Target User: Mountaineers and expedition groups.

Use: 4 season expeditions, mountain use and long duration adventures.

Series	Specification		
	Flysheet	Groundsheet	Poles
ULTRA Series	ULTRA 10000mm HH UHMWPE	Watershed Si2 2000mm HH Nylon 3000mm HH Nylon	DAC

Lightweight Series	Watershed Si2 20 denier 3000mm HH Nylon	Waterbloc 7000mm HH Nylon	DAC Terra Nova® Reflex
Classic Series	Watershed 30 denier 5000mm HH Nylon	Waterbloc 10000mm HH Nylon	DAC Terra Nova® Reflex
UK Made Expedition Series	Watershed 70 denier 7000mm HH Nylon	Waterbloc 10000mm HH Nylon	Terra Nova® Reflex

THE LIGHTEST TENTS

In 2004 Terra Nova Equipment set the benchmark for lightweight tent development when it launched the world's first sub 1kg tent. A Guinness World Record marked the achievement of creating the lightest tent in the world.

The development of new materials and use of fabrics not previously used on a commercial scale in tent production has allowed Terra Nova Equipment to slice more weight off its record breaking tents and achieve 3 further world records for the lightest tent.

In its quest to use new materials Terra Nova Equipment also pioneered the use of bonded seams in ultra-light tents starting with the Voyager Ultra 2 in 2012, a semi-geodesic, 2 person model weighing just 1kg and made using the extremely lightweight ULTRA fabric.

The lightest tent on the market is currently the Laser Pulse Ultra 1 which not only has a minimum weight of 450g but a tiny pack size of just 30cm x 9cm, making it extremely packable for ultra events.

ULTRA Series

The cutting edge products within the Terra Nova ULTRA series push development boundaries with the latest technologies. Created using state of the art materials, construction methods and designs. The range includes the lightest tents in the world, devised for those who want to save every gramme of weight. Each model is tailored to provide the lightest solution possible.

Laser Pulse Ultra 1

One of the lightest double-wall shelters in the world

- Uses our extremely light ULTRA fabric
- Compatible with our FASTPACK system
- Alloy end pole included for super-light weight
- Inner height 82cm
- 30cm pack length

Solar Ultra 2

The lightest
2 person
free-standing
tent in the
world

- The lightest 2 person free-standing tent currently available
- Ideal for mountain marathon events or short duration backpacking trips
- Super strong, factory bonded seams
- Uses our extremely lightweight ULTRA fabric
- Compatible with our FASTPACK system

Voyager Ultra 2

- The classic Voyager design in ULTRA form
- All bonded seams on flysheet
- Over 50% lighter than the standard Voyager
- Maximum stability for a minimum weight
- Half mesh inner door for better ventilation

Tarp Ultra 1

- Lightest weight tarp
- Reinforced eyelet positions and webbing tapes for flexible set up
- Ideal for use with Moonlite Bivi
- Uses extremely lightweight ULTRA fabric

Superlight Series

The primary design objective for the Superlight series is to create extremely lightweight products balanced with strength and durability. Terra Nova Equipment has achieved this by developing 7 and 10 denier nylon 6.6 ripstop flysheet fabrics with a maximum tear strength of 6kg.

Laser Pulse 1

One of the lightest double-wall shelters in the world

- One of the lightest double-wall shelters in the world (together with Laser Pulse Ultra 1)
- Uses 7 denier Watershed Si2 ripstop flysheet
- Compatible with our FASTPACK system
- Alloy end pole included for super-light weight
- Good sitting height 82cm
- 30cm pack length

Lightweight Series

This series includes styles which have become the industry blueprint for lightweight tent design, winning numerous awards and seen worldwide. 20 Denier Watershed Si2 silicone flysheet fabrics are used to provide a good balance of low weight and durability. Styles have been innovatively designed to reduce the number of seams over the inner for better weather protection.

Terra Nova has a comprehensive offering of 1, 2 and 3 person lightweight tents with a packed length of 30cm or less. Most of the tents weigh less than 1.5kg and provide good head height and usable space.

The compact pack size embraces the trend in the outdoor industry towards products that pack down much smaller, providing more versatile carrying options for backpacking and the increasingly popular bike packing. Models include the award winning Laser Compact 2 and Starlite range of lightweight tunnel tents.

Laser Compact 1

- The modern day classic single person tent
- Multiple 'Best in Test' awards
- Compatible with our FASTPACK system
- Vents at both ends

FOOTPRINT AVAILABLE

Laser Compact 2

FOOTPRINT AVAILABLE

Starlite 1

- Lighter than any other traditional tunnel tent currently available
- Packed length of only 29cm
- Corner buckle adjustment, good ventilation and easy to pitch
- Ideal for bike packing and backpacking

Starlite 2

- Weighs just 1.53kg
- Huge porch and inner space
- Short packed length and flexible tent bag
- Ideal for bike packing and backpacking

Starlite 3

- Enormous porch area and large side door
- Access and space for bike and gear storage
- Good ventilation front and back
- Flysheet buckle corners
- Short packed length
- Ideal for bike packing and backpacking

Classic Series

Tried and tested design and lightweight performance from Terra Nova® tents. Models in the classic series have fully taped Watershed flysheets for complete waterproof protection and are designed for year round use.

Southern Cross 1

- Completely free-standing tent
- Flysheet-first pitching
- Spacious inner and porch

Expedition Super Quasar

- Exceptionally strong - a great choice for base camps and exposed pitches
- Poles cross at the sides for added stability
- Exceptional waterproofing and a fully taped fly and groundsheet
- Two doors and porches

Expedition Hyperspace

- A familiar sight on expedition base camps, strong and stable
- Two doors, one with a large extended porch
- Exceptional waterproofing and a fully taped fly and groundsheet

Expedition Terra Firma

- Proven on multiple Himalayan and Polar expeditions
- Two doors, both with large extended porches
- Lots of headroom
- Exceptionally waterproof with a taped fly and groundsheet

Expedition Cosmos

- The ultimate tent for group and expedition use
- Two main doors and two smaller corner doors
- Closeable flysheet vents
- Exceptionally waterproof with a taped fly and groundsheet
- Standing height in main part of inner

Hydrostatic head is tested to ISO Standards. See page 32 for more information.
Max (packed weight) includes: flysheet, inner tent, poles, pegs and all bags. Min weight includes: flysheet, inner tent and poles.

The Terra Nova® FastPack System

The FastPack system is a method of using a Footprint instead of an inner tent and is designed to trim even more weight and bulk from your rucksack. On selected Terra Nova® models, it is possible to leave the inner tent behind, if conditions permit, and use a Footprint instead to cover the floor area of the tent. A Footprint must be used if an inner tent is not, to provide the tension and anchor points required by the poles. For the tent models where the FastPack system is possible, footprints are available in the standard footprint fabric. See page 55 for more information about Footprints.

Footprint Weights for FastPack Compatible Tents

	Standard Fabric
Laser Pulse Ultra 1/Laser Pulse 1	217g / 7oz
Laser Compact 1	236g / 8oz
Laser Compact 2	
Solar Ultra 2/Solar Photon 2	215g / 7oz

Terra Nova Equipment has unrivalled expertise in the development of specialist fabrics and materials for its award winning products. The company has always been at the forefront of technical development; it produced the first PU/ Silicone coated flysheet fabric in the 1990s and more recently was the first to use bonded seam technology in commercial tent production.

Our fabrics are specified from the first polymer stage, through to final fabric production. Working together with specialist fabric manufacturers we create exclusive, bespoke fabrics which provide optimal performance for specific tent models.

How fabrics are created

Nylon and polyester fabrics start life as polymer granules. The polymer is heated and extruded to produce an ultra-fine filament. These filaments are twisted together to form a yarn, which is then used to weave the finished fabric. The thickness of each yarn is measured as 'Denier'.

1: Polymer beads 2: 1 yarn showing filament construction 3: Preparation of yarns prior to water jet weaving process

Denier

What is a denier?

Denier is a unit of measurement that is used to determine the fibre thickness of individual threads or yarns used in the creation of textiles. Textiles with a high denier count tend to be thick, sturdy and durable. Textiles with a low denier count tend to be fine and lightweight. Woven fabric used for tent construction is often referred to in terms of denier. 7 or 10 denier are amongst the lightest tent fabrics, 70 or 100 denier fabrics are amongst the most robust tent fabrics. By contrast the human hair is around 20 denier.

How is a denier measured?

Denier is defined as the mass in grammes per 9000m of yarn. Therefore 15 denier yarn weighs 15g per 9000m. The denier measurement originated from a natural reference: a single strand of silk is approximately 1 denier.

Weight and Durability

In the quest for lighter fabrics tear and tensile strength are equally important considerations. To ensure the balance of weight and performance Terra Nova Equipment develops fabrics with:

- An optimised ripstop weave
- Using the best polymer
- Construction providing the best strength to weight ratio

Materials Testing

Terra Nova Equipment tests materials in its own laboratory, in commercial test houses and in the field. A range of tests are carried out on new fabrics, existing fabrics are also subject to regular QA tests.

Tests include:

Water Impermeability

Fabric water resistance

A fabric's ability to resist water penetration is expressed as its resistance to a vertical column of water over a given surface area. This test gives the 'Hydrostatic Head' measurement and is a good indicator of the waterproofing performance of a fabric. So a fabric with a Hydrostatic Head measurement of 3000mm, can support a vertical column of water 3000mm tall, without leaking. There are several test methods, but Terra Nova Equipment uses the ISO method because the applied pressure acts over a larger surface area and is therefore more severe. This gives a better representation of long term performance than a test carried out over a small area such as the Mullen test method, which is preferred in some countries.

Tear, Tensile and Bending Tests

Fabric tensile strength

Tent pole bending test

Our internal test equipment allows us to conduct comprehensive tear and tensile tests for our fabrics when new and after ageing. In addition our 4 point load pole bending apparatus gives valuable feedback concerning the flexing, recovery and ultimate yield strength for all our tent poles.

Weathering Tests

Some of many fabrics exposed on south facing frames set at 45 degrees

In addition to long term weathering tests outdoors, Terra Nova Equipment also conducts accelerated weathering tests in order to give a complete picture of a fabric's performance.

UV Degradation

UV light is one of the major causes of the reduction in flysheet performance. UV light degrades fabrics by cutting the molecular bonds that hold the fabric together. The effect of UV light is reduced in a number of ways:

- UV inhibitors
- Silicone elastomer coating on the outer surface provides additional protection
- Fabric dye colours are selected to give maximum UV resistance

Tents that are subject to a greater degree of UV light, such as base camp tents, have flysheet fabrics specified to provide more UV resistance than backpacking tents which tend to spend less time pitched during daylight hours.

Longevity of fabrics

Long term weathering tests carried out in the laboratory and outside are an important part of the development process. When specifying fabrics Terra Nova Equipment not only looks at the performance of the fabric when it is new, but more importantly how performance can be maintained.

Bonded Seam Construction

Terra Nova Equipment is a pioneer in the use of bonded seams (without sewing) technology and amongst the first to use it on a commercial scale for tents. In tests our bonded seam construction is stronger than the fabric itself. All bonded seam construction takes place in our UK factory.

Fabrics

ULTRA

ULTRA fabric is constructed from a UHMWPE mat, laminated on each side with a very thin high performance polymer film. The UHMWPE patented mat is up to 25% stronger and only half the weight of many traditionally woven siliconised ripstop nylons. The material also retains a higher proportion of its strength and water resistance even after UV weathering exposure. Wherever possible we bond rather than sew ULTRA fabric. Bonding the seams offers higher tensile strength, lighter weight construction, and in long term tests, a high degree of resistance to UV weathering.

Watershed®

First developed by Terra Nova Equipment in 1992, Watershed® was the first silicone / PU coating hybrid for flysheets, designed to offer enhanced water resistance and withstand better the effects of UV light. Dyestuffs are treated to improve UV protection and UV coating inhibitors help reduce the degrading effects of UV light. Watershed® has evolved with a specialist PU coating with extra hydrolysis resistance. This improves water resistance and gives extra grip to seam sealing tape providing a fully waterproof seam. Watershed® fabric used in expedition/heavy duty tents has added UV inhibitors and light stabilisers in the coating to provide greater durability.

Watershed® Si2

Watershed® Si2 is a silicone/silicone coated ripstop nylon flysheet fabric designed to be as light and as strong as possible, for specific end uses. Different constructions, yarn types and fabric weaves are used to provide the best performance for specific tent models. Various weights of fabric are used: 7, 10 and 20 denier in the Superlight and Lightweight Series.

Waterbloc

Waterbloc fabrics, generally used in Terra Nova® groundsheets, have been developed to be extremely water resistant. A highly specified PU provides maximum resistance to hydrolysis action. Nylon is widely used for Terra Nova® groundsheets and flysheets due to the excellent chemical and mechanical bond it provides with the coating systems. Different weights and weave of fabric are used to provide the best performance for specific tent models.

Poles

DAC Poles

All DAC poles are extruded 7001 aluminium alloy. DAC have created an exclusive derivative called TH72M. After heat treatment to T8 state the finished TH72M alloy gives an excellent balance of strength and stiffness ideally suited to the rigors of tent pole use. DAC NFL are the lightest type of DAC pole. This is achieved by swaging both ends of the pole section. DAC Green Anodising used on NFL poles is a more environmentally friendly anodising process achieved through water recycling and the choice of chemicals.

Terra Nova® Reflex Poles

Reflex poles are 7001 T6 extruded aluminium poles specified by Terra Nova Equipment and exclusive to Terra Nova®. The diameter of the pole is selected to suit each particular tent model. The colour coded poles have pre-bent sections where appropriate to suit stress conditions and superior anodising treatments to reduce breakages and improve durability. In independent tests Reflex poles have been shown to outperform and outlast other poles, even in extreme conditions. Pole feet are removable, allowing repairs in the field and to reduce corrosive splitting and Dura Cord shock cord won't wither in extreme conditions.

Major Development Milestones

1992

Launch of Watershed® – the first PU / silicone coated flysheet fabric in the industry.

2002

Key research in collaboration with Bristol University resulting in renewed focus on the anodisation processes leading to improved tent pole performance.

2004

World's first sub 1kg tent launched – Terra Nova® Laser Lite. Guinness World Record for the lightest tent.

2005

Introduction of FLO2 air permeable GORE-TEX® membrane in bivi bags.

2007-2010

3 further Guinness World Records.

2011

First to use ULTRA fabric in commercial tent production.

2012

First to use bonded seams in commercially produced tents with the launch of Terra Nova® Voyager Ultra 2.

2014

'Litespeed' lightweight air permeable sleeping bag fabric launched.

2016

Launch of Southern Cross completely free standing 4 season tent. OIA Award Winner.

2017

Starlite range of tents introduced with short packed length, designed for bike packing.

2020

Inflatable tent and awning range launched.

Wild Country® Tent Range Explained

Specialist Series

Tents developed using more technical materials and designs which are suitable for year round use. Models offer a good balance of space and low weight.

Target User: Those looking for a more technical tent at an attractive price.

Uses: 4 season backpacking, expeditions, trekking. Spacious designs for greater comfort on longer trips.

Classic Series

Tried and tested Wild Country® performance.

Target User: The outdoor enthusiast looking for good quality and reliability in an easy to use and affordable tent.

Uses: Backpacking, cycle touring, group use (eg Scouts, Guides, DofE and other youth expeditions), weekend trips, compact family camping.

Core Series

Our introductory series of tents which provide great value for money for occasional or first time campers.

Target User: The more cost conscious camper who requires Wild Country® performance but not necessarily all of the frills.

Uses: Backpacking, cycle touring, campsite use.

Classic Series

Tried and tested Wild Country performance.
Easy to use models provide good quality and reliability.

Compact Pack Size

Compact versions of Wild Country tent models have a maximum packed length of 30cm making them a really practical offer, fitting easily on bikes and giving more carrying options when backpacking or travelling.

Easy Pitch

Tents are easy to pitch. The flysheet and inner are pegged out together and there is colour coding on the tapes which connect the flysheet and inner together – no more guesswork!

Easy Pack

The side opening bag which includes a tarp on which to place the tent before rolling it in to the bag and closing the drawstring makes packing tents away a quick and easy process.

ZONDA Range

Family Air Tents & Awning

The Zonda range of inflatable tents and awnings combines years of experience designing tents with input from top family tent stockists. Designed to provide the perfect combination of comfort, useful features, reliability and ease of use we wanted to remove the hassle and make family camping trips as enjoyable as possible.

Light and airy colour schemes, tinted windows and large porch doors which can be fully or part opened, provide comfortable accommodation whatever the weather. When it comes to bedtime dark fabric bedrooms help everyone get a better night's sleep.

There's plenty of insect proof ventilation for hot summer days but a draught proof living area if the weather turns cooler.

The simple rectangular floor plan makes the tents swift and easy to pitch and the 10 year guarantee on the Air Flex poles provides reassurance. When it's time to go home rolling the folded tent into the oversized tarp style bag makes packing up a breeze.

From the 4 person model which is ideal for smaller families or couples, to 6 and 8 person models which enable people to create a home from home on longer holidays, plus awnings for campervans and motorhomes our range covers something for every family camper.

Zonda 8EP

The Zonda 8EP is a huge home-from-home air tent, perfect for hassle free holidays with family and friends.

A great tent for up to eight people that provides a very large living area. Whether you are having a longer weekend break or an extended family holiday the 8EP air tent is the perfect choice. Four bedrooms, a large enclosed living area plus a huge porch, which can be fully opened or closed, meaning you have plenty of space whatever the weather. For such a large tent it is straightforward to pitch and also easy to pack thanks to the oversize tarp-style bag.

Tarp style tent bag

- 12cm Air Flex poles for rapid pitching, which come with a 10 year guarantee
- Rectangular floor plan for easy pitching and webbing end guy lines for stability
- Sewn in living area groundsheet to keep bugs and draughts out
- Specially selected black fabric three compartment bedroom with toggled in dividers to help everyone sleep well. Plus additional bedroom compartment.
- Large tinted windows with privacy curtains
- Insect proof mesh panels on side doors and inner windows
- Large insect proof vents along the side of the bedroom area
- Two electrical hook up access points and lantern hanging points
- Oversize tarp-style tent bag which makes it easier to pack away
- Slim-line double action hand pump with pressure gauge included
- Repair kit & valve tool to tighten valves included
- Carpet and footprint available

Zonda 6EP

Perfect for weekends away or longer holidays with family and friends, the Zonda 6EP 6 person air tent is easy to pitch and provides fabulous accommodation. The light and airy living space and enclosed porch provide comfortable accommodation and darker bedrooms help everyone sleep better. The Air Flex poles (which come with a 10 year guarantee) combined with a rectangular floor plan make pitching swift and simple, plus the innovative oversize tarp style tent bag makes packing away a breeze.

- 12cm Air Flex poles for rapid pitching, which come with a 10 year guarantee

Zonda 4EP

Perfect for smaller families or couples the Zonda 4EP has all the great features of our inflatable tents in a more compact version. The smaller dimensions allow the use of 10cm Diameter Air Flex poles that contribute to a smaller packed size. If you are looking at 4 man air tents then the Zonda 4EP is an ideal choice and great for weekend getaways as well as longer holidays for up to 4 people.

- 10cm Air Flex poles for rapid pitching, which come with a 10 year guarantee
- Rectangular floor plan for easy pitching and webbing end guy lines for stability
- Sewn in living area groundsheet to keep bugs and drafts out
- Specially selected black fabric two compartment bedroom with a toggled in divider to help everyone sleep well.

Tent Fabrics and Technology

The same thought and understanding goes into the development of fabrics for use in the Wild Country® range as the Terra Nova® range.

Stormtex N4000Si

Stormtex N4000Si fabrics are nylon based with a PU / silicone coating for maximum water resistance. The 30 denier ripstop construction is 20% lighter than Stormtex P4000 fabrics allowing tent volume to be maintained but weight to be decreased, offering a better space to weight ratio. Being PU coated the fabric can be taped to provide a fully waterproof seam.

Stormtex P4000

Stormtex P4000 fabrics used in Wild Country® tents, have been developed to provide the best performance for the conditions the tents are designed to face. The fabrics are polyester and have a PU / DWR coating to improve water resistance and allow taping, so a fully waterproof seam can be offered. Fabrics tested to the CPAI84 standard for flame retardancy are indicated as fire resistant. Different weights and weave of fabric are used to provide the best performance for specific tent models.

Aqua Stop

Aqua Stop fabrics are polyester and designed to be strong and hardwearing underfoot, whilst maintaining a high level of water resistance.

Poles

Superflex Poles

Superflex poles are 7001 T6 extruded aluminium poles for use in Wild Country® tents. The diameter of the pole is selected to suit each particular tent model. The colour-coded poles have pre-bent sections where appropriate to suit stress conditions and superior anodising treatments to reduce breakages and improve durability.

Fabric being woven

Guaranteed waterproof flysheet.

Tents marked with this logo are guaranteed waterproof from purchase. This is achieved by factory taping the seams or by providing a waterproof hood over pole seams. Please note that where a waterproof hood is provided these tents may have unprotected seams and zips, but are innovatively designed so that rainwater will not drip into or onto the inner. Our lightweight tents are designed to minimise seams.

We have a skilled UK manufacturing and repair facility at our Derbyshire base. All products in this workbook with the Union Jack logo are made in the UK. As well as producing standard products in our range, our specialist facility produces bespoke versions of our tents, such as heavy duty and white options for contract use. Please contact us for details.

Footprints

Footprints are designed to protect your tent groundsheet from wear and tear, moisture and dirt, and are custom-fitted for each tent model. It covers the area of ground covered by the tent (i.e. the inner and porch area). Although we use the highest specification of waterproof and durable fabric in all of our tent groundsheets, using a Footprint (sold separately) helps to prolong the life of a tent by reducing wear and tear on the fabric. Using a Footprint also keeps the tent underside clean and reduces the amount of moisture and grit that gets packed along with the tent. It is also much easier to dry and clean a Footprint than the whole tent.

Bivi Bags

Terra Nova® bivi bags use the best materials to suit their use, whether it is an overnight in moderate conditions or for more extreme conditions. Whatever your trip, there is a bivi in our range to suit you.

Survival Bivi

- Waterproof and breathable sleeping bag cover
- Great value
- Small pack size
- Terra Nova Dusk fabric

Code: 52SB

Moonlite Bivi

BEST IN
CLASS

210g

- Waterproof and breathable sleeping bag cover
- Seam sealed
- Half moon foot
- Drawstring closure
- Tiny pack size
- Mosquito net screen
- Terra Nova Moonlite fabric
- Colour: Green

Code: 52ML

Jupiter Lite Bivi

- Lightweight, waterproof and highly breathable
- For minimalist backpacking
- Single pre-curved aluminium alloy pole gives extra head room and improved ventilation
- Good ventilation makes it suitable for warmer, more humid conditions
- No-see-um mesh door to keep out bugs
- Terra Nova Moonlite fabric and Waterbloc groundsheet

Code: 52JL

Coshee Micro

- Deluxe bivi
- Low wind cheating shape for good weather protection
- Copious porch space and 1 door
- Superflex T6 alloy poles
- Low weight/small pack size
- For more information see page 51

Code: 44COM

Bivi Fabrics and Technology

Bivi Bag Fabrics

Moonlite

A lightweight, waterproof and highly breathable fabric. At only 55gsm, giving 10m Hydrostatic Head, and a breathability minimum of 15,000 g/sqm/24hrs, this laminated nylon ripstop is perfect for our Moonlite bivi.

Dusk

A mid weight, waterproof and breathable fabric. With a weight of 75gsm, 10m HH and good level of breathability this ripstop nylon is a tough all round performer for our Survival bivi.

Guaranteed waterproof flysheet.

Products marked with this logo are guaranteed waterproof from purchase. This is achieved by factory taping the seams.

Tarps

Our comprehensive Tarp range offers lightweight summer shelter options in a range of sizes. Suitable for use with bivi bags, they are a great minimalist alternative to a tent.

Utility Porch Tarp 1

- Designed to fit the Zephyros 1 and 2, Laser Competition 1 and 2, Laser Pulse 1
- Offers extra weather protected storage space and ventilation options
- Uses Stormtex P4000FR fabric (same as Zephyros and Hoolie models)

Code: 43UPT1

Tarp Ultra 1

- Lightest weight tarp
- Reinforced eyelet positions and webbing tapes for flexible set up
- Ideal for use with Moonlite Bivi
- Uses extremely lightweight ULTRA fabric
- Poles not included

Code: 43TU1

Competition Tarp 1 & 2

- Available in 2 size options
- Reinforced eyelet positions and webbing tapes for flexible set up
- Ideal for use with Moonlite or Discovery Bivi
- Uses Watershed Si2 fabric (same as Laser Competition)
- Poles not included

Code: 43CT1, 43CT2

Adventure Tarp 1 & 2

- Available in 2 size options
- Reinforced eyelet positions and webbing tapes for flexible set up
- Ideal for use with Survival Bivi
- Uses Stormtex P4000FR fabric (same as Zephyros and Hoolie models)
- Poles not included

Code: 43ATZ1, 43ATZ2

Bothy Bags

Used by mountain leaders, rescue organisations, backcountry skiers and canoe guides all over the world, these indispensable lightweight emergency shelters allow the users to create a 'microclimate' that is warm and dry - perfect for map reading, group discussions or even as a morale booster for wet lunch breaks.

DID YOU KNOW...

Bothy comes from the 18th century of Irish and Scottish Gaelic descent. It means hut or small cottage and used as a mountain refuge.

Bothy 2

Bothy 4

- Range of sizes
- Mesh vents
- Roof 'sockets' to use walking poles as extra support
- PU welded windows suitable for temperatures as low as -30°C

	Packed Size:	Weight:
2 person	22cm x 11.5cm	370g / 14oz

Tent Accessories

Pegs

1g Titanium

1g Ti Pegs, as seen on: ULTRA tents
Hold well for their size in good ground, can be doubled up and still be lighter than most other pegs.
Length 13cm.
Available in packs of 6
Code: 50PEGST11

2g Titanium

Hold well for their size in good ground, can be doubled up and still be lighter than most other pegs.
Length 13cm.
Available in packs of 6
Code: 50PEGST12

5.5g Ti Skewers

Excellent lightweight yet strong peg, swap for your normal pegs to lighten your pack in one easy step.
Length 15cm.
Available in packs of 6
Code: 50PEGST1

10g Superlite Ti 'V' Angle Peg

Increased surface area for a minimal weight penalty, great for critical load bearing points.
Length 15cm.
Available in packs of 6
Code: 50PEGT18

18g Ti 'V' Angle Peg

Great holding power for superlite travellers. Essential for pitching on sandy or loose ground.
Length 15cm.
Available in packs of 6
Code: 50PEGT18

11g Alloy 'V' Angle Peg

The standard peg for Specialist and Classic Series Wild Country® tents. A firm hold and beaded for extra strength.
Length 14cm.
Available in packs of 10
Code: 50PEGA10

TN Alloy Peg

TN Alloy peg - 11g, as seen on: Lightweight and Classic Series Terra Nova® tents. Made from high grade 7075 aluminium for continual use.
Length 17cm
Available in packs of 10
Code: 50PEGS

SOS Stake

Sand Or Snow (SOS) peg - 35g
Huge aluminium stakes with a curved profile. 35mm wide - can be buried sideways or used traditionally.
Length 35cm
Available in packs of 10
Code: 50SOS

Pack of 6. Large 3cm long. Small 2cm long.
Code: Large: 50TSCAM
Small: 50TSCAMS

Tent Bags

Extra or replacement (sizes S, M, L)
Code: 49TBAG

Dead Guy

Weight with stones or sand.
Code: 50TSDGUY

Pole Repair Sleeve

Fits poles up to 11mm diameter. Can be used to extract pole end tips for Southern Cross and Starlite models.
Code: 49PSLE

The Loft

2 storage pockets fits selected tent models
Code: 50LOFT

Sleeping Bags

Elite Down Sleeping Bags

Terra Nova® Elite down bags represent superlight down performance at affordable prices. Using 600 fill power down and tightly woven polyester microfibre, the Elite range is ideal for 2-3 season backpacking trips where weight and pack size need to be minimised. All Elite bags have the following features:

- 600 fill power duck down
- Zip guards to prevent snagging when zipping or unzipping
- Locking zip sliders to keep the zip in place and avoid it creeping open
- Up and over zip pull for ease of access
- Shoulder baffle
- Internal pocket for valuables
- Drawcord closure

Code: 55E550

Terra Nova® Elite Sleeping Bags

Fabrics

Tightly woven Polyester Microfibre constructions of up to 320T which blend excellent down-proofing with high levels of breathability. This combination gives excellent comfort levels and minimum pack size.

Fill

600 fill power duck down.

Fill Power

Fill power is a measurement of the amount of space (expressed in cubic inches) one ounce of down will occupy when allowed to reach its maximum loft.

E.g. one ounce of 900 fill power goose down will loft to 900 cubic inches. The higher the fill power, the larger the down cluster. Larger down clusters will loft higher and trap more air which makes it warmer.

There are 2 main test methods for fill power: a US method and a European method (using the Lorch machine). Both tests involve putting down into a cylinder and compressing it with a weight. The Lorch method, which uses a larger diameter cylinder and heavier weight, is more stringent. Terra Nova® uses the European Lorch method for measuring down fill power.

Rucksacks and Packs Bags

This range of rucksacks has been designed to reduce weight, allowing you to carry more of what is important or reduce the overall load, enabling you to use energy for your chosen activity instead of carrying kit. In some cases reducing the weight carried also allows you to be more balanced/feel less encumbered, and can help your overall performance.

More information
available at
<http://bit.ly/TN-Rucksacks>

Design features for our range of packs include:

- External pockets in lightweight mesh for quick access to bottles and essential gear
- Zip flaps to enhance water resistance
- Zipped hip belt pockets for 'on the go' snacks and valuables
- Integrated chest whistle
- Hydration bladder compatible - internal pocket and outlet points on both shoulders
- Compression cords to keep contents in place when running or carrying extra kit externally
- Reflective trims for safety in low light and dark conditions
- EVA foam padded straps

Laser 6

- Lightweight day use, running and day races
- Mesh back panel
- Two hip pockets
- Compression cords
- Reflective tabs

Weight: 173g
Size: 6 Litre

Available in:

Size: 5-11 Litre

Code: 56LVSP

Available in:
Yellow Black

Trekking Poles

Terra Nova® trekking poles have been designed to be as light as possible. Their low weight means you burn less energy using them, making more energy available to enjoy your chosen activity. We use 7075 aluminium because of its high strength-to-weight ratio – it is the lightest available but extremely strong and durable.

Trail Lite

Classic lightweight trekking pole which suits most people's requirements.

- 3 section pole with clip locks enabling easy adjustment
- Made with 7075 aluminium alloy
- Lightweight and comfortable EVA handle and soft wrist strap
- Removable trekking basket
- Tungsten tip with protective rubber ferrule

Weight	Maximum Adjustable Length	Packed Length
279g / 10oz	137cm / 54"	64cm / 25"

Code: 57TLP

Trail Elite

Folding, compact trekking pole which easily adjusts to your required length but packs down small for carrying in a rucksack.

- 3 section folding pole with clip locks enabling easy adjustment
- Made with 7075 aluminium alloy
- Lightweight and comfortable EVA handle and soft wrist strap
- Removable trekking basket
- Tungsten tip with protective rubber ferrule

Weight	Maximum Adjustable Length	Packed Length
274g / 9.5oz	130cm / 51"	37cm / 14"

Packed length	64cm / 14"	37cm / 14"	82cm / 32"

Technical Information

Aluminium 7075 Poles

7075 aluminium alloy is the lightest and highest strength alloy available. Its high tensile strength allows a thinner walled, and therefore lighter, tube to be produced which has the same strength. Low weight means less energy is burned using them, making more energy available for the activity.

Clip Lock System

Clip locks provide a more secure locking mechanism than a twist system and allow the pole length to be quickly and easily altered. A screw adjustment is also included to change the strength of closure, ensuring a secure lock each time.

Tungsten Carbide End Tips

Terra Nova trekking poles have tungsten carbide end tips. Tungsten carbide is extremely hard and very abrasion resistant. These properties make it ideal for the end of trekking poles, which are constantly striking hard ground. End tips made from tungsten carbide will last longer than those made of alternative materials.

Sales Support

Tent pitching videos

Tent pitching videos demonstrate how to pitch a specific model but also include internal shots and highlight key features. They are designed to help customers pitch the tent correctly once they have made a purchase, but are also a good pre sales tool, providing customers with a good overview of the structure of the tent and its size. The videos are hosted on our youtube channels www.youtube.com/terranovaequipment and [/wildcountrytents](http://www.youtube.com/wildcountrytents) which can be linked to your own website.

Tent specification cards

Tent specification cards, which are ideal to display with a pitched model or compile as a catalogue in store, are available for all models. These can be downloaded from www.terra-nova.co.uk on the relevant product page or via Dropbox link.

Tent training videos

Tent training videos provide retail sales staff with a good overview of each model. They will enable staff to identify the most appropriate tent for individual customers and answer questions confidently about the Terra Nova® and Wild Country® models. Videos cover key points, target users and features and benefits.

Videos are hosted on our YouTube channels. They are therefore available to watch at a time that suits the individual and more than once if a training refresher is required. Please ask your account manager for details of how to access the training videos.

Beach Flags

For use indoors, can be pegged down for outside use.
