

PRODUCT GUIDE

Spring - Summer 23

Terra Nova Equipment has a long history of producing some of the world's best outdoor gear, gear which is tried and tested in our laboratory and in some of the most extreme environments on the planet.

Our 'Best in Class' design ethos drives an ambition to develop and use some of the best components and materials available. We are leaders in materials research and innovation, continuously looking to create and use fabrics that are unique in the outdoor industry. The result is award winning products which enable outdoor enthusiasts to achieve their goals. Terra Nova® is the brand of choice for most outdoor professionals across the globe.

The Terra Nova® brand has its heritage in mountain tents including the iconic Quasar. However, the last 15 years has seen it established as the leader in the design and development of extremely lightweight gear, including the lightest tents in the world.

Wild Country camping products from Terra Nova Equipment are designed for customers seeking the perfect combination of reliability, simplicity of use and great value.

Taking some of the design and quality standards from the Terra Nova® brand, products, which now include inflatable tents and awnings, are used by everyone from the serious user to first time campers and families to escape into the outdoors.

Sustainability

At Terra Nova, we're passionate about the outdoors and equally as passionate about reducing our impact on the environment by taking the necessary steps to reduce our carbon footprint across our product range and throughout our offices.

Our products

We're constantly researching ways to improve the performance of our products whilst minimising their environmental impact. Working closely with our suppliers, we're developing new sustainable materials, components and coatings that are thoroughly tested to ensure they perform to our demanding standards.

One key area of research aims to reduce and eventually eradicate the use of PFC's from all of our DWR coatings.

We're proud to be taking the first step towards this by creating the majority of Terra Nova tents with PFC-free, breathable inner tent fabric for 2023. Alongside this, some models using our Si2 flysheet and groundsheet fabric will now be entirely PFC-free.

Look out for the PFC-Free icon throughout the brochure to see which models are more eco-friendly.

Terra Nova Equipment continue to research more eco-friendly solutions to help sustain the planet that we all love and explore.

Our offices

Terra Nova Equipment ensures it maintains full control over how its products are produced and maintains a no-landfill, low environmental impact policy for the company's waste and low energy solutions at its UK site:

Terra Nova Equipment are committed to first-class environmental standards in our company's modern Clay Cross warehouse, with LED lighting, efficient heating and good standards of insulation.

- We partner with Derbyshire-based Peak Waste Limited to handle all waste material. Peak Waste has avoided using landfills for over 12 years.
- Waste from Terra Nova Equipment is manually sorted; recyclable materials are segregated for reprocessing and residual waste is shredded for use in a Waste to Energy facility.
- We use sea freight for transportation, rather than environmentally unfriendly air freight.

THE LIGHTEST TENTS

In 2004 Terra Nova Equipment set the benchmark for lightweight tent development when it launched the world's first sub 1kg tent. A Guinness World Record marked the achievement of creating the lightest tent in the world.

The development of new materials and use of fabrics not previously used on a commercial scale in tent production has allowed Terra Nova Equipment to slice more weight off its record breaking tents and achieve 3 further world records for the lightest tent.

In its quest to use new materials Terra Nova Equipment also pioneered the use of bonded seams in ultra-light tents starting with the Voyager Ultra 2 in 2012, a semi-geodesic, 2 person model weighing just 1kg and made using the extremely lightweight ULTRA fabric.

The lightest tent is currently the Laser Pulse Ultra 1 which not only has a minimum weight of 450g but a tiny pack size of just 30cm x 9cm, making it extremely packable for ultra events.

Terra Nova Tent Range Explained

The Terra Nova tent range is divided into 5 series:

ULTRA Series

This series comprises cutting edge products which push development boundaries with the latest technologies. Created using state of the art construction methods and designs and tailored to provide the lightest solutions possible.

Target User: The outdoor athlete wanting the latest technology and lightest weight kit so they can achieve their best performance.

Use: Adventure racing, mountain marathons, 1-2 night 3 season backpacking trips.

SUPERLIGHT Series

Designed to create extremely lightweight products balanced with strength and durability. Achieved using both 7 and 10 denier nylon 6.6 ripstop flysheet fabrics with a maximum tear strength of 6kg.

Target User: The outdoor enthusiast wanting extremely lightweight kit for short to medium length trips, events and activities.

Use: Mountain marathons, 3 season backpacking.

LIGHTWEIGHT Series

This series includes designs which have become the industry blueprint for lightweight tent design, winning numerous awards and used worldwide. Models offer a good balance of durability and low weight using a 20 denier nylon ripstop flysheet fabric.

Target User: The outdoor enthusiast looking for a good balance of weight, durability and space.

Use: Medium duration 3-4 season backpacking trips, trekking. Activities where low weight is still important.

ALL SEASON Range

All Season Range tents provide tried and tested lightweight performance – including spacious models suitable for year-round use, with fully taped Watershed flysheets for complete waterproof protection.

Target User: Those looking for a good all-round lightweight tent that can be used across a whole range of activities throughout the year. Prepared to accept a slightly heavier weight (than tents in the Lightweight Series) for more space and strength.

Use: 4 season trekking and backpacking. Longer duration trips.

UK Expedition Series

Using our most durable flysheet fabrics and made in the UK, this series gives peace of mind to those who may experience severe weather when travelling to the most remote parts of the world.

Target User: Mountaineers and expedition groups.

Use: 4 season expeditions, mountain use and long duration adventures.

UK Expedition Series	Watershed 70 denier 7000mm HH	Waterbloc 10000mm HH Nylon	Terra Nova Reflex

The Terra Nova FastPack System

The FastPack system is a method of using a Footprint instead of an inner tent and is designed to trim even more weight and bulk from your rucksack. On selected Terra Nova models, it is possible to leave the inner tent behind, if conditions permit, and use a Footprint instead to cover the floor area of the tent. A Footprint must be used if an inner tent is not, to provide the tension and anchor points required by the poles. For the tent models where the FastPack system is possible, footprints are available in the standard footprint fabric. See page 93 for more information about Footprints.

Footprint Weights for FastPack Compatible Tents

STANDARD FABRIC

Hydrostatic head is tested to ISO Standards. See page 12 for more information. Weight includes: flysheet, inner tent, poles, pegs and all bags.

Materials and Technology

Terra Nova Equipment has unrivalled expertise in the development of specialist fabrics and materials for its award winning products. The company has always been at the forefront of technical development; it produced the first PU/ Silicone coated flysheet fabric in the 1990s and more recently was the first to use bonded seam technology in commercial tent production.

Our fabrics are specified from the first polymer stage, through to final fabric production. Working together with specialist fabric manufacturers we create exclusive, bespoke fabrics which provide optimal performance for specific tent models.

How fabrics are created

Nylon and polyester fabrics start life as polymer granules. The polymer is heated and extruded to produce an ultra-fine filament. These filaments are twisted together to form a yarn, which is then used to weave the finished fabric. The thickness of each yarn is measured as 'Denier'.

1: Polymer beads 2: 1 yarn showing filament construction 3: Preparation of yarns prior to water jet weaving process

Denier

What is a denier?

Denier is a unit of measurement that is used to determine the fibre thickness of individual threads or yarns used in the creation of textiles. Textiles with a high denier count tend to be thick, sturdy and durable. Textiles with a low denier count tend to be fine and lightweight. Woven fabric used for tent construction is often referred to in terms of denier. 7 or 10 denier are amongst the lightest tent fabrics, 70 or 100 denier fabrics are amongst the most robust tent fabrics. By contrast the human hair is around 20 denier.

How is a denier measured?

Denier is defined as the mass in grammes per 9000m of yarn. Therefore 15 denier yarn weighs 15g per 9000m. The denier measurement originated from a natural reference: a single strand of silk is approximately 1 denier.

Weight and Durability

In the quest for lighter fabrics tear and tensile strength are equally important considerations. To ensure the balance of weight and performance Terra Nova Equipment develops fabrics with:

- An optimised ripstop weave
- Using the best polymer
- Construction providing the best strength to weight ratio

Materials Testing

Terra Nova Equipment tests materials in its own laboratory, in commercial test houses and in the field. A range of tests are carried out on new fabrics, existing fabrics are also subject to regular QA tests.

Tests include:

Water Impermeability

Fabric water resistance

A fabric's ability to resist water penetration is expressed as its resistance to a vertical column of water over a given surface area. This test gives the 'Hydrostatic Head' measurement and is a good indicator of the waterproofing performance of a fabric. So a fabric with a Hydrostatic Head measurement of 3000mm, can support a vertical column of water 3000mm tall, without leaking. There are several test methods, but Terra Nova

Equipment uses the ISO method because the applied pressure acts over a larger surface area and is therefore more severe. This gives a better representation of long term performance than a test carried out over a small area such as the Mullen test method, which is preferred in some countries.

Tear, Tensile and Bending Tests

Fabric tensile strength

Tent pole bending test

Our internal test equipment allows us to conduct comprehensive tear and tensile tests for our fabrics when new and after ageing. In addition our 4 point load pole bending apparatus gives valuable feedback concerning the flexing, recovery and ultimate yield strength for all our tent poles.

Weathering Tests

In addition to long term weathering tests outdoors, Terra Nova Equipment also conducts accelerated weathering tests in order to give a complete picture of a fabric's performance.

Some of many fabrics exposed on south facing frames set at 45 degrees

UV Degradation

UV light is one of the major causes of the reduction in flysheet performance. UV light degrades fabrics by cutting the molecular bonds that hold the fabric together. The effect of UV light is reduced in a number of ways:

- UV inhibitors
- Silicone elastomer coating on the outer surface provides additional protection
- Fabric dye colours are selected to give maximum UV resistance

Tents that are subject to a greater degree of UV light, such as base camp tents, have flysheet fabrics specified to provide more UV resistance than backpacking tents which tend to spend less time pitched during daylight hours.

Longevity of fabrics

Long term weathering tests carried out in the laboratory and outside are an important part of the development process. When specifying fabrics Terra Nova Equipment not only looks at the performance of the fabric when it is new, but more importantly how performance can be maintained.

Seam Plus water-resistant seam technology

Overcomes the difficulty of sealing silicone coated fabrics. A unique combination of seam construction and factory applied silicone treatments provides an extremely water resistant seam.

Bonded Seam Construction

Terra Nova Equipment is a pioneer in the use of bonded seams (without sewing) technology and amongst the first to use it on a commercial scale for tents. In tests our bonded seam construction is stronger than the fabric itself. All bonded seam construction takes place in our UK factory.

Fabrics

ULTRA

ULTRA fabric is constructed from a UHMWPE mat, laminated on each side with a very thin high performance polymer film. The UHMWPE patented mat is up to 25% stronger and only half the weight of many traditionally woven siliconised ripstop nylons. The material also retains a higher proportion of its strength and water resistance even after UV weathering exposure. Wherever possible we bond rather than sew ULTRA fabric. Bonding the seams offers higher tensile strength, lighter weight construction, and in long term tests, a high degree of resistance to UV weathering.

Watershed

First developed by Terra Nova Equipment in 1992, Watershed was the first silicone / PU coating hybrid for flysheets, designed to offer enhanced water resistance and withstand better the effects of UV light. Dyestuffs are treated to improve UV protection and UV coating inhibitors help reduce the degrading effects of UV light. Watershed has evolved with a specialist PU coating with extra hydrolysis resistance. This improves water resistance and gives extra grip to seam sealing tape providing a fully waterproof seam. Watershed fabric used in expedition/heavy duty tents has added UV inhibitors and light stabilisers in the coating to provide greater durability.

Watershed Si2

Watershed Si2 is a silicone/silicone coated ripstop nylon flysheet fabric designed to be as light and as strong as possible, for specific end uses. Different constructions, yarn types and fabric weaves are used to provide the best performance for specific tent models. Various weights of fabric are used: 7, 10, 20 and 30 denier in the Superlight, Lightweight Series and All-Season series..

Waterbloc

Waterbloc fabrics, generally used in Terra Nova groundsheets, have been developed to be extremely water resistant. A highly specified PU provides maximum resistance to hydrolysis action. Nylon is widely used for Terra Nova groundsheets and flysheets due to the excellent chemical and mechanical bond it provides with the coating systems. Different weights and weave of fabric are used to provide the best performance for specific tent models.

C0 Inner Tent WR Coating

PFC-Free coating applied to the breathable inner tent fabric to reduce wetting out from condensation.

Poles

DAC Poles

All DAC poles are extruded 7001 aluminium alloy. DAC have created an exclusive derivative called TH72M. After heat treatment to T8 state the finished TH72M alloy gives an excellent balance of strength and stiffness ideally suited to the rigours of tent pole use. DAC NFL are the lightest type of DAC pole. This is achieved by swaging both ends of the pole section. DAC Green Anodising used on NFL poles is a more environmentally friendly anodising process achieved through water recycling and the choice of chemicals.

Terra Nova Reflex Poles

Reflex poles are 7001 T6 extruded aluminium poles specified by Terra Nova Equipment and exclusive to Terra Nova. The diameter of the pole is selected to suit each particular tent model. The colour coded poles have pre-bent sections where appropriate to suit stress conditions and superior anodising treatments to reduce breakages and

improve durability. In independent tests Reflex poles have been shown to outperform and outlast other poles, even in extreme conditions. Pole feet are removable, allowing repairs in the field and to reduce corrosive splitting and Dura Cord shock cord won't wither in extreme conditions.

Major Development Milestones

1992	Launch of Watershed – the first PU / silicone coated flysheet fabric in the industry.
2002	Key research in collaboration with Bristol University resulting in renewed focus on the anodisation processes leading to improved tent pole performance.
2004	World's first sub 1kg tent launched – Terra Nova Laser Lite. Guinness World Record for the lightest tent.
2005	Introduction of FLO2 air permeable GORE-TEX® membrane in bivvy bags.
2007-2010	3 further Guinness World Records.
2011	First to use ULTRA fabric in commercial tent production.
2012	First to use bonded seams in commercially produced tents with the launch of Terra Nova Voyager Ultra 2.
2014	'Litespeed' lightweight air permeable sleeping bag fabric launched.
2016	Launch of Southern Cross completely free standing 4 season tent. OIA Award Winner.
2017	Starlite range of tents introduced with short packed length, designed for bike packing.
2020	Inflatable tent and awning range launched.
2023	Introduction of PFC-free fabric

For more information please go to www.terra-nova.co.uk/product-information-advice/

ULTRA SERIES

The cutting edge products within the Terra Nova ULTRA series push development boundaries with the latest technologies. Created using state of the art materials, construction methods and designs. The range includes the lightest tents in the world, devised for those who want to save every gramme of weight. Each model is tailored to provide the lightest solution possible.

Laser Pulse Ultra 1

- Uses our extremely light ULTRA fabric
- Compatible with our FASTPACK system
- Alloy end pole included for super-light weight
- Inner height 82cm
- 30cm pack length

Code: 43LPU1

PFC-free breathable inner tent fabric

SUPERLIGHT SERIES

The primary design objective for the Superlight Series is to create extremely lightweight products balanced with strength and durability. Terra Nova Equipment has achieved this by developing 7 and 10 denier nylon 6.6 ripstop flysheet fabrics with a maximum tear strength of 6kg.

Solar Photon 2

- Extremely lightweight 2-person self-supporting tent
- Compatible with our FASTPACK system
- Stable shape for use in poor weather
- Very easy to set up and use
- Front and rear fly hoods for great ventilation
- 1g Titanium pegs

Code: 43SP2E

Watershed® Si2

Watershed® Si2 is a silicone/silicone-coated Ripstop nylon flysheet fabric designed to be as light and as strong as possible, for specific end users. Different constructions, yarn types and fabric weaves are used to provide the best performance for specific tent models. Various weights of fabric are used: 7, 10, 20 and 30 deniers in the Superlight and Lightweight Series.

ULIGHT WEIGHT SERIES

This series includes styles which have become the industry blueprint for lightweight tent design, winning numerous awards and seen worldwide. 20 Denier Watershed Si2 silicone flysheet fabrics are used to provide a good balance of low weight and durability. Styles have been innovatively designed to reduce the number of seams over the inner for better weather protection.

Laser Compact 1

- The modern day classic single person tent
- Now with seam plus factory silicone sealed main seam
- Now supplied with Terra Firma Mini Pegs (P78)
- Guylines attached directly to pole sleeve
- Multiple 'Best in Test' awards
- Compatible with our FASTPACK system
- Vents at both ends

WATERBLOC

Waterbloc fabrics, generally used in Terra Nova® groundsheets/footprints, have been developed to be extremely water-resistant. A highly specified PU provides maximum resistance to hydrolysis action. Nylon is widely used for Terra Nova® groundsheets and flysheets due to the excellent chemical and mechanical bond it provides with the coating systems. Different weights and weaves of the fabric are used to provide the best performance for specific tent models.

FALL SEASON RANGE

Tried and tested design and lightweight performance from Terra Nova tents. Models in the classic series have fully taped Watershed flysheets for complete waterproof protection and are designed for year round use.

Northern Lite 2 NEW

- Allows flysheet first or all as one pitching to help keep the inner dry in wet conditions
- External all-in-one hub pole system
- Flysheet pockets to add trekking poles for extra stability
- Spacious porch and inner
- DAC NFL poles

Code: 43NL2

WATERSHED®

First developed by Terra Nova Equipment in 1992, Watershed® was the first silicone/PU coating hybrid for flysheets, designed to offer enhanced water resistance and withstand better the effects of UV light. Dyestuffs are treated to improve UV protection and UV coating inhibitors help reduce the degrading effects of UV light. Watershed® has evolved with a specialist PU coating with extra hydrolysis resistance. This improves water resistance and gives extra grip to seam sealing tape providing a fully waterproof seam. Watershed® fabric used in expedition/heavy duty tents has added UV inhibitors and light stabilisers in the coating to provide greater durability.

UK EXPEDITION RANGE

Using our most durable flysheet fabrics and made in the UK, this series gives peace of mind to those who may experience severe weather when travelling to the most remote parts of the world.

Expedition Quasar

- The original geodesic mountain tent, built for long term use
- Extremely strong, proven design

Wild Country Tent Range Explained

The Wild Country tent range is divided into 3 series:

Tents developed using more technical materials and designs which are suitable for year round use. Models offer a good balance of space and low weight.

Tried and tested Wild Country performance.

Our introductory series of tents which provide great value for money for occasional or first time campers.

Target User: Those looking for a more technical tent at an attractive price.

Use: 4 season backpacking, expeditions, trekking. Spacious designs for greater comfort on longer trips.

Target User: The outdoor enthusiast looking for good quality and reliability in an easy to use and affordable tent.

Use: Backpacking, cycle touring, group use (eg Scouts, Guides, DofE and other youth expeditions), weekend trips, compact family camping.

Target User: The more cost conscious camper who requires Wild Country performance but not necessarily all of the frills.

Use: Backpacking, cycle touring, campsite use.

Easy Pitch, Easy Pack & Compact

Easy Pitch

Tents are easy to pitch. The flysheet and inner are pegged out together and there is colour coding on the tapes which connect the flysheet and inner together – no more guesswork!

Easy Pack

The side opening bag which includes a tarp on which to place the tent before rolling it in to the bag and closing the drawstring makes packing tents away a quick and easy process.

Compact Pack Size

Compact versions of Wild Country tent models have a maximum packed length of 30cm making them a really practical offer, fitting easily on bikes and giving more carrying options when backpacking or travelling.

STORMTEX P4000

Stormtex P4000 fabrics used in Wild Country® tents have been developed to provide the best performance for the conditions the tents are designed to face. The fabrics are polyester and have a PU/DWR coating to improve water resistance and allow taping, so a fully waterproof seam can be offered. Fabrics tested to the CPAI84 standard for flame retardancy are indicated as fire-resistant. Different weights and weaves of the fabric are used to provide the best performance for specific tent models.

Zonda 4EP

- 10cm Air Flex poles for rapid pitching
- 10 year guarantee on Air Flex poles
- Rectangular floor plan for easy pitching and webbing end guy lines for stability

FAMILY AIR TENTS

With over 35 years of experience and expertise designing Terra Nova and Wild Country tents for use in some of the most extreme places on the planet, we've applied our wealth of knowledge about materials, structure and fabrics to create robust, well thought-out family tents. Following their recent launch, the Zonda range of inflatable tents is rapidly establishing itself as the choice for more adventurous families.

Trail Elite

Folding, compact trekking pole which easily adjusts to your required length but packs down small for carrying in a rucksack.

- 3 section folding pole with clip locks enabling easy adjustment
- Made with 7075 aluminium alloy
- Lightweight and comfortable EVA handle and soft wrist strap
- Removable trekking basket
- Tungsten tip with protective rubber ferrule

Code: 57TEP

Technical Information

Aluminium 7075 Poles

7075 aluminium alloy is the lightest and highest strength alloy available. Its high tensile strength allows a thinner walled, and therefore lighter, tube to be produced which has the same strength. Low weight means less energy is burned using them, making more energy available for the activity.

Clip Lock System

Clip locks provide a more secure locking mechanism than a twist system and allow the pole length to be quickly and easily altered. A screw adjustment is also included to change the strength of closure, ensuring a secure lock each time.

Tungsten Carbide End Tips

Terra Nova trekking poles have tungsten carbide end tips. Tungsten carbide is extremely hard and very abrasion resistant. These properties make it ideal for the end of trekking poles, which are constantly striking hard ground. End tips made from tungsten carbide will last longer than those made of alternative materials.

BIVI BAGS

Terra Nova® bivi bags use the best materials to suit their use, whether it is an overnight in moderate conditions or for more extreme conditions. Whatever your trip, there is a bivi in our range to suit you.

Survival Bivi

- Waterproof and breathable sleeping bag cover
- Great value
- Small pack size
- Terra Nova Dusk fabric

Code: 52SB

Moonlite Bivi

- Waterproof and breathable sleeping bag cover
- Seam sealed
- Half moon foot
- Tiny pack size
- Mosquito net screen
- Terra Nova Moonlite fabric
- Colour: Green with black mesh

Code: 52ML

Jupiter Lite Bivi

- Lightweight, waterproof and highly breathable
- Now supplied with Terra Firma Mini Pegs (P78)
- For minimalist backpacking
- Single pre-curved aluminium alloy pole gives extra head room and improved ventilation
- Good ventilation makes it suitable for warmer, more humid conditions
- No-see-um mesh door to keep out bugs
- Terra Nova Moonlite fabric and Waterbloc groundsheet

Code: 52JL

Bivi Fabrics and Technology

Moonlite

A lightweight, waterproof and highly breathable fabric. At only 55gsm, giving 10m Hydrostatic Head, and a breathability minimum of 15,000 g/sqm/24hrs, this laminated nylon ripstop is perfect for our Moonlite bivi and Jupiter Lite Bivi.

Guaranteed waterproof flysheet.
Products marked with this logo are guaranteed waterproof from purchase.
This is achieved by factory taping the seams.

Dusk

A mid weight, waterproof and breathable fabric. With a weight of 75gsm, 10m HH and good level of breathability this ripstop nylon is a tough all round performer for our Survival bivi.

- Reinforced eyelet positions and webbing tapes for flexible set up
- Ideal for use with Survival Bivi
- Uses Stormtex P4000FR fabric (same as Zephyros and Hoolie models)
- Poles not included

Code: 43ATC1, 43ATC2

BOTHY BAGS

DID YOU KNOW...
Bothy comes from the 18th century of Irish and Scottish Gaelic descent. It means hut or small cottage and used as a mountain refuge.

Used by mountain leaders, rescue organisations, backcountry skiers and canoe guides all over the world, these indispensable lightweight emergency shelters allow the users to create a 'microclimate' that is warm and dry - perfect for map reading, group discussions or even as a morale booster for wet lunch breaks.

Bothy 2

- 2 person Bothy
- Roof 'sockets' to use walking poles as extra support
- PU welded windows suitable for temperatures as low as -30°C
- Polyester Ripstop 68 denier 3000 HH

WEIGHT

- See pricelist

Pole Repair Sleeve

Fits poles up to 11mm diameter.
Can be used to extract pole end tips
for Southern Cross and Starlite models.

Code: 49PSLE

SLEEPING MATTRESSES

Deluxe Self Inflating Sleeping Mattresses

Our luxurious self inflating sleeping mats have been designed to help you get a good night's sleep on your camping holiday. The top and sides are made from a soft feel stretch polyester fabric that helps mould the mat to your shape while the base is made from a heavier duty 190T polyester for durability. The mat is filled with 10cm deep PU foam for insulation that has horizontal cores cut into it to remove weight and bulk whilst speeding up inflation and deflation. We use a durable TPU air tight coating on the inside of the outer fabric and screw-top valves to prevent accidental deflation. The valves have three-positions for convenience, fully open position for speedy inflation/deflation, a top up position so you can regulate the firmness of the mat and a pack away position that helps prevent re-inflation when you are packing the mat away. Supplied in a side opening carry bag for easy pack away that also has compression straps to reduce the transport size

- 30D knit polyester top and sides
- 190T polyester base
- PU foam insulation with horizontal cores to remove bulk
- TPU air tight fabric coating to help prevent deflation
- Two 3-position valves for easy inflation and deflation
- Carry bag with compression straps

SLEEPING BAGS

Our luxurious sleeping bags are the perfect choice for a good night's sleep on your camping holiday. We've used soft to the touch fabric that feels instantly warm and comfortable on the inside and a ripstop weave on the outside for durability. The zips allow versatile use; the bags open at the side(s) and foot end and can be unzipped completely to use as a quilt. The double bag can also be used as two singles for ultimate flexibility.

Burbage Grande Single Bag

- An oversized single sleeping bag, longer and wider than a standard single
- Shell: 210T polyester ripstop for durability
- Inner: Soft to touch 190T pongee polyester for comfort
