SPRING SUMMER 2027 COLLECTION

TERRA NOVA EQUIPMENT

Engineered For Every Adventure.

Terra Nova Equipment has a long-established reputation for producing some of the world’s finest outdoor gear. For over four decades, our tents and equipment have been trusted in some of the most demanding environments on the planet. Our passion for creating high-quality outdoor kit drives us to use the very best components and materials available. This commitment places us at the forefront of materials research and innovation, continually seeking out and developing fabrics that are unique within the outdoor industry. The result is a collection of award-winning products that help outdoor enthusiasts achieve their ambitions.

Terra Nova® is the brand of choice for countless outdoor professionals around the globe. With a proud heritage in mountain and lightweight tents and equipment, the Terra Nova® name has become synonymous with high-performance, high-quality design. Today's generation of Terra Nova® products continues to build on this legacy, underpinned by a class-leading commitment to sustainability.

Drawing on the design philosophy and quality standards of the Terra Nova® brand, Wild Country® products are created for outdoor enthusiasts seeking the ideal balance of reliability, ease of use, and exceptional value. With two fabric options, a strong environmental story, and innovative functional features, the Wild Country® range provides a versatile choice for those looking to escape into the outdoors.

Alongside new Terra Nova® and Wild Country® tent styles, Spring/Summer 2027 also marks the launch of our latest sleep systems, furniture, and trekking poles. Built on our reputation as a leader in outdoor equipment, these new collections strengthen our position as a trusted partner for every adventure, from the everyday to the extraordinary.

TERRA NOVA EQUIPMENT

SUSTAINABILITY

At Terra Nova Equipment, our passion for the outdoors is inseparable from our responsibility to protect it. As global environmental challenges intensify, we recognise that meaningful progress requires more than incremental adjustments, it calls for a long-term commitment that shapes every facet of our work. This ethos guides the decisions behind our products, our materials, and the way we operate each day. From the fibres we specify to the energy we consume, we continually refine our practices to ensure our gear not only performs in the world's wildest places, but helps preserve them for generations to come.

Our approach begins at the material level, where durability, repairability and reduced environmental impact are prioritised from the outset. Terra Nova® and Wild Country® tents now incorporate a carefully considered blend of PFC-free, recycled and solution-dyed fabrics across their specifications - helping to lower environmental impact while maintaining industry-leading performance. Select models feature fully PFC-free flysheets, groundsheets and inner fabrics, ensuring that harmful water-repellent treatments are phased out. Solution-dyed fibres, used across key tent fabrics, significantly reduce water consumption, chemical

inputs and energy use during production, supporting a more responsible supply chain.

These material choices are reinforced by meaningful improvements in how we manufacture and distribute our products. Our manufacturing facility now operates on 90% solar power, greatly reducing reliance on conventional energy sources and shrinking our operational footprint. All tents are packaged using compostable starch-based protective bags, eliminating plastic from our tent packaging entirely, while our accessories range is delivered in recycled and fully recyclable packaging, ensuring that responsible design continues beyond the product itself.

Alongside lower-impact materials and operations, we apply the same focus to waste reduction and circularity. Our Derbyshire headquarters employs landfill-free waste management, manual waste sorting that maximises recycling and energy recovery, and energy-efficient systems throughout the building. We prioritise sea freight to reduce emissions within our logistics chain and continually look for new ways to refine and improve our processes.

Circularity also underpins our product philosophy. We build gear to last - and to be repaired. Our dedicated repair service gives damaged equipment a second life, from re-stitching seams to replacing tent poles, keeping products in use and out of landfill for longer. Our tent trade-in scheme further supports this approach, rewarding customers who return older tents and ensuring end-of-life products are responsibly processed.

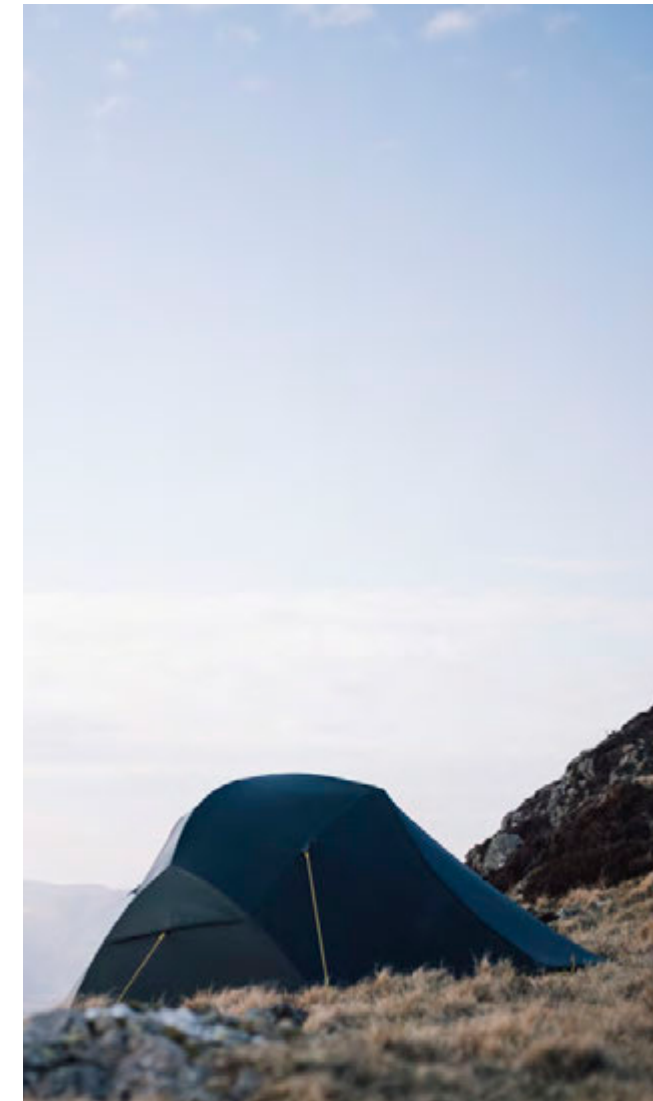

The SS27 range represents the next evolution of this journey. It brings together lower-impact fabrics, advanced technologies and more responsible production methods to create equipment that balances high-performance protection with environmental stewardship. Whether through recycled yarns, solution-dyed textiles, PFC-free coatings or energy-efficient manufacturing, we are continually pushing our materials and processes forward to ensure that every product contributes to a healthier outdoor environment.

Sustainability isn't a feature. It's a foundation. It's a foundation and a promise to protect the places that inspire us.

TERRA NOVA EQUIPMENT

GUARANTEE

TERRA NOVA® LIFETIME GUARANTEE

Every Terra Nova® branded product is protected by our Limited Lifetime Guarantee, offering long-term reassurance to the original owner for the usable life of the product. This refers to the period during which the item can reasonably deliver the performance it was designed for - something that naturally varies depending on how it is used, the conditions it is exposed to and the care it receives. A product used frequently in demanding environments will naturally have a shorter lifespan than one used occasionally and well maintained. For this reason, we assess each case individually rather than applying a fixed timeframe. While this guarantee covers all Terra Nova® products, tent and bivi poles are excluded, as they are protected under our dedicated No-Quibble Alloy Pole Guarantee.

WILD COUNTRY® GUARANTEE

All Wild Country® products come with a 2-year limited guarantee, providing the original owner protection against genuine manufacturing faults or defects for two years from the date of purchase. This policy reflects the Wild Country® commitment to offering dependable, high-value outdoor equipment across its range. Tent poles are not included within this guarantee, as they are covered separately by our dedicated No-Quibble Alloy Pole Guarantee.

NO-QUIBBLE ALLOY POLE GUARANTEE

Every alloy pole supplied with Terra Nova® and Wild Country® tents or bivis is covered by our No-Quibble Pole Guarantee. For two years from the date of purchase, we will replace any damaged pole - regardless of the cause, including unforeseen mishaps or accidental damage. This straightforward, hassle-free policy ensures you can rely on your equipment with confidence, knowing that any tent or bivi pole issue will be resolved quickly so your adventures can continue uninterrupted.

Guaranteed Waterproof

Fully sealed flysheet and groundsheet seams provide dependable, long-lasting waterproof protection exactly where it's needed most.

PFC-Free

Products carrying this icon use CO₂ PFC-free and PFAS-free fabrics, reducing the environmental impact of water-repellent treatments.

Recycled

This icon indicates the use of fabrics made with post-consumer recycled plastic bottles, giving waste materials a second life.

Solution-Dyed

Products with this icon use solution-dyed yarns, significantly reducing water and energy consumption compared with traditional dyeing methods, while enhancing UV resistance for improved longevity.

Triple Ripstop

Core to our TriPlex® tent fabrics, this composite nylon/polyester structure provides enhanced tear resistance and long-term durability.

AiroCorner™

Products featuring AiroCorner™ use a seamless groundsheet with a folded corner construction, improving water resistance and increasing overall strength.

DAC Green Anodizing

Indicates the use of DAC poles finished with Green Anodization, a process that eliminates nitric and phosphoric acids for a cleaner, lower-impact pole treatment.

TN Reflex

Products with this icon utilise our specially engineered TN Reflex poles, often with a larger diameter for increased stiffness and strength in challenging conditions.

Trekking Pole Compatible

Identifies products designed with multifunctional features that can be deployed using a telescopic trekking pole for added versatility.

PoleLock Compatible

Products with this icon can be used with our PoleLock accessory, designed to add structural support to flysheet-first pitching tunnels and non-freestanding tents. Suitable for poles up to 9mm in diameter.

PitchLite Compatible

Products with this icon are compatible with the PitchLite system, enabling flysheet-only pitching for fast, lightweight shelter options.

FastPack Compatible

Compatible with the FastPack system, allowing the flysheet to be pitched together with a footprint, removing the need for the inner tent when prioritising speed or weight savings.

FlexiPorch Compatible

Features an adjustable toggle system that allows you to tailor porch size to suit changing conditions and storage needs.

Made in UK

Indicates products manufactured in our Derbyshire facility, combining expert craftsmanship with reduced transport impact.

TERRA NOVA

TECHNOLOGIES

TRIPLEX™ FABRIC: ENGINEERED FOR PERFORMANCE, DESIGNED FOR THE PLANET

Recycled

TriPlex™ begins with responsible material choices. Terra Nova® tents now feature recycled flysheets, groundsheet and inner fabrics made from post-consumer plastic bottles, reducing waste and giving high-quality fibres a second life. Look for the recycled icon throughout the brochure to identify tents using these lower-impact fabric compositions.

Solution-Dyed

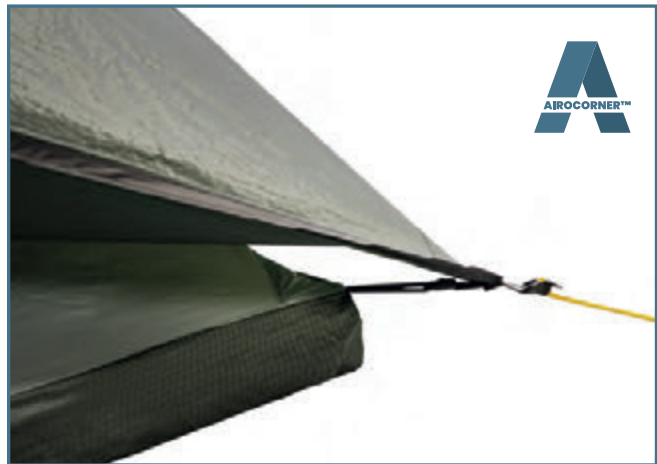

A defining characteristic of TriPlex™ is the use of solution-dyed yarns, a process where pigments are added at the polymer stage before the yarn is formed. This process locks colour directly into the fibre, creating long-lasting, highly pigmented fabrics that resist fading while significantly reducing environmental impact. Compared with traditional dyeing methods, solution dyeing uses dramatically less water, lowers chemical output and reduces energy consumption, helping minimise harmful by-products such as CO₂. All solution-dyed products are clearly marked with the Solution Dyed icon.

PFC-Free CO

TriPlex™ eliminates the need for PFC and PFAS-based water-repellent treatments - chemicals known for their persistence and ecological impact. Following extensive testing to maintain Terra Nova® performance standards, all Solar, Laser, iO, Odyssey, Titan and Performance range tents now use fully PFC-free fabrics across flysheets, groundsheet and inner materials.

Triple Ripstop: Strength Woven into Every Layer

At the core of TriPlex™ lies its triple ripstop construction - a distinctive composite weave developed to deliver exceptional strength, stability and durability at minimal weight. This advanced fabric structure uses a repeating pattern of reinforced fibres in three-directional intervals, creating a stable matrix that significantly improves tear resistance. By combining the properties of nylon and polyester within this composite substrate, TriPlex™ achieves both high tensile strength and excellent dimensional stability. In real-world use, this construction enhances UV resistance and helps the fabric maintain its form under load, reducing stretch and ensuring reliable performance over long periods outdoors.

HIGH-PRESSURE SILICONE

TriPlex™ fabric has enabled the development of Terra Nova® advanced High-Pressure Silicone Coating System (HPS Si/Si) - a dual-sided silicone application that encases every yarn in a high-performance protective layer. By coating both sides of the groundsheet textile, this system delivers exceptional water resistance, eliminates the need for conventional WR treatments and is fully CO by design. The mirrored silicone layers also work in harmony, creating a symbiotic partnership that enhances stability and strength exactly where the fabric is most stressed, resulting in a cleaner, lighter and more durable groundsheet than traditional alternatives.

AIROCORNER™

Working alongside this coating system is AiroCorner™, a construction innovation designed to maximise the advantages of High-Pressure Silicone. By removing groundsheet corner seams entirely, AiroCorner™ eliminates a key leakage point while dispersing tension more evenly across the fabric. This improves long-term strength, enhances waterproofing at the tent's most vulnerable areas and creates a more reliable connection between the groundsheet corners and the flysheet hem, making certain models easier to pitch and more secure once erected. Together, High-Pressure Silicone and AiroCorner™ form an integrated performance system, each technology reinforcing the other to deliver superior durability and protection in the field.

These technologies are found across Terra Nova® Solar, Laser and iO tent ranges, ensuring that our most lightweight designs benefit from the full capabilities of this innovative partnership.

PERFORMANCE RANGE
UPDATED QUASAR

CODE: TQ002

DESCRIPTION

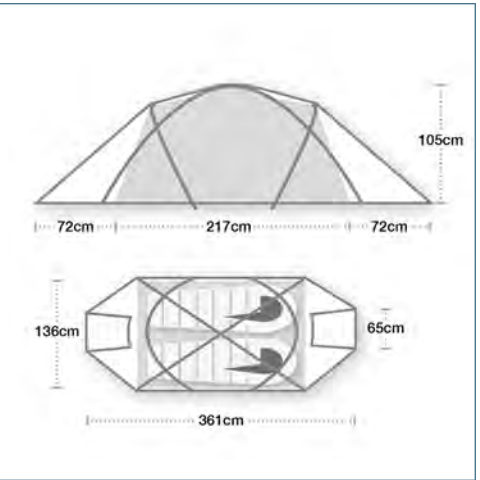

The iconic Quasar has been the benchmark for four-season expedition tents for over 40 years, and the latest update for 2026 with TriPlex™ flysheet continues its legacy. This fully geodesic, high-strength shelter is designed for extreme conditions, offering unparalleled stability, durability, and all-weather protection. Weighing 3.05kg at maximum and 2.71kg at minimum, it is built for serious mountaineers, polar explorers, and all-season adventurers. The Quasar is stronger, more sustainable, and as expedition ready as ever.

WILD COUNTRY

TECHNOLOGIES

For Wild Country®, our commitment to responsible design is every bit as integral as it is with Terra Nova®. The same sustainability principles: lower-impact materials, long-lasting construction and thoughtful fabric innovation run through the entire Wild Country® range. From the first polymer stage to final production, we work closely with specialist mills to specify fabrics that balance performance, durability and environmental responsibility. Our technologies are developed to provide dependable protection in real-world conditions while reducing the footprint of every tent we make.

AQUASTOP SD™ FABRIC

AquaStop SD™ is an advanced, solution-dyed polyester ripstop fabric from Wild Country®, engineered to offer reliable all-weather performance with reduced environmental impact. Built from 68-denier polyester ripstop, it provides an excellent strength-to-weight ratio and long-lasting durability.

A PU coating and fully taped seams ensure guaranteed waterproof protection, while a CO water-repellent finish removes the need for environmentally harmful PFC treatments.

The sustainability story continues inside the tent:

The inner tent uses recycled polyester ripstop with a CO finish and solution-dyed mesh, reducing water, chemical and energy consumption during production. The groundsheet is made from recycled polyester with PU coating, featuring seam-sealed corners and seams, and finished with a CO WR treatment for dependable waterproofing.

Together, these features create a robust, lower-impact fabric system suitable for a wide range of conditions.

WILD COUNTRY
by Terra Nova

WILD COUNTRY

ELITE FABRIC

The Elite fabric platform from Wild Country® represents our most advanced lightweight specification, combining reduced environmental impact with dependable all-season performance. Constructed from 20-denier nylon ripstop, it achieves an impressively low pack weight while maintaining excellent fabric stability and long-term resilience. A silicone/PU hybrid coating ensures strong, reliable waterproof performance, and taped seams provide complete protection in sustained wet conditions.

Environmental responsibility continues throughout the tent's internal fabrics.

The inner tent uses recycled polyester ripstop with a CO water-repellent finish and solution-dyed mesh, chosen to reduce water, chemical and energy consumption during production.

The groundsheet is made from recycled polyester with a PU coating, finished with fully seam-sealed corners and seams, and a CO WR treatment for consistent, long-lasting waterproofing.

Tents built with Elite fabrics also feature premium Dyneema® guylines, offering exceptional strength-to-weight performance and improved stability in challenging conditions, further elevating the reliability of the Wild Country® Elite range.

TERRA NOVA

INFLATABLE MATTRESSES & PILLOWS

As we continue to evolve our product offering, our commitment to comfort, performance and responsible design extends into an all-new category for Spring/Summer 2027: inflatable sleeping mattresses and pillows. Developed with the same attention to detail and materials expertise found across our tent ranges, these products are designed to provide dependable rest wherever the journey leads. Lightweight, hard-wearing and built with a clear focus on environmental responsibility, the new range brings elevated comfort to nights in the wild without compromising packability or durability.

At the heart of the sleeping mattress collection is a carefully engineered fabric combination: a 40-denier recycled, PFC-free ripstop base chosen for abrasion resistance and long-term toughness, paired with a 20-denier recycled, PFC-free ripstop upper that keeps weight to a minimum. With All-Season R-Value ratings of 4.7-4.9 and an Extreme R-Value rating of 8.2-8.9, these mats provide reliable insulation across a wide variety of conditions. Available in regular and large sizes, they pack down compactly for efficient stowing, and each mat includes repair patches for continued use in the field.

Complementing the mats is the new Halo Down Pillow, designed to deliver comfort without adding unnecessary bulk. Filled with 650 fill-power RDS-certified down, it is both lightweight and highly compressible, making it an ideal companion for multi-day trips. The pillow features a recycled, PFC-free ripstop fabric construction and a removable outer, ensuring easy cleaning and long-term practicality. Together, these new sleep system products bring an enhanced level of rest, warmth and refinement to nights spent outdoors.

TERRA NOVA

R-WEIGHT

To help customers make clearer, more informed comparisons across our new inflatable sleeping mats, we have introduced the Terra Nova® R-Weight standard - a simple yet highly effective measure of true weight-to-warmth efficiency. Calculated by dividing the mat's overall weight (excluding the storage bag) by its R-Value, R-Weight expresses the number of grams required to achieve each unit of insulation performance. The lower the number, the greater the weight-to-performance ratio.

Throughout the development of the new sleeping mat range, Terra Nova® have prioritised and optimised this standard, carefully balancing materials, construction and insulation to ensure class-leading performance without compromising overall size, comfort or usability. R-Weight brings clarity, consistency and purpose to performance evaluation, empowering users to select the ideal blend of warmth and packability for their adventures.

	SIZE	PACKED DIMENSION	INFLATED DIMENSION	WEIGHT	R-VALUE	R-WEIGHT

TERRA NOVA

FURNITURE

Continuing our commitment to thoughtful, performance-driven design, Spring/ Summer 2027 marks the introduction of a brand-new Terra Nova® product category: ultralight outdoor furniture. Developed with the same materials expertise and engineering focus found across our tents and sleep systems, this new range is built for those who want comfort at camp without carrying unnecessary weight. Every component has been considered, refined and optimised to deliver strength, packability and ease of use in equal measure - ensuring these products are as reliable on the trail as they are relaxing at the end of it.

Launching with two models - the Lumen Chair and the Orb Stool, the range places ultra-lightweight performance at its core while maintaining the structural stability needed for real-world adventure. Both designs make use of a Nylon / UHMWPE (Ultra-High-Molecular-Weight Polyethylene) fabric composition, a premium fibre known for its exceptional strength-to-weight ratio and long-term durability. When combined with their compact pack sizes and shock-corded pole construction, the result is furniture that assembles quickly, packs down small and carries effortlessly, without compromising comfort or support. Whether for multi-day treks, bikepacking escapes or lightweight camping setups, the new Terra Nova® Furniture range brings a new level of ease and performance to life outdoors.

TERRA NOVA

NEW LUMEN CHAIR

CODE: TALUC001

FEATURES

An ultra-lightweight design using Nylon / UHMWPE for excellent strength and durability, with a strong frame offering a 120kg load capacity. Shock-corded poles enable a quick, intuitive setup, delivering comfort with minimal weight and bulk. Small pack size with a storage bag included.

SPECIFICATIONS

TERRA NOVA & WILD COUNTRY

TREKKING POLES

For Spring/Summer 2027, we've refined and expanded our approach to trekking pole design, bringing enhanced performance, improved material selection and a broader range of options across both brands. While Trekking Poles have long been part of the Terra Nova Equipment offer, the SS27 season marks a significant step forward - with an updated Terra Nova® collection built for serious, weight-focused users, and, for the first time, the introduction of Wild Country® Trekking Poles, bringing accessible, high-value performance to a wider audience. Together, the new ranges offer dependable support for everything from long-distance mountain routes to everyday hillwalking, each engineered with the same attention to detail seen across our tents and sleep systems.

Terra Nova® Trekking Poles

The updated Terra Nova® pole collection introduces three new high-performance styles, each constructed using high-carbon-content shafts to deliver exceptional rigidity, reduced vibration and minimal carry weight. Available in telescopic, Z-fold and fixed-length designs, every model has been developed with ultralight construction at its core, ensuring premium performance without unnecessary grams.

Ergonomic hand grips provide secure, all-day comfort, while removable baskets and tungsten carbide tips offer reliable traction across varied terrain. Designed for the dedicated, weight-conscious user, these poles bring together precision engineering and dependable trail performance for demanding adventures.

Wild Country® Trekking Poles

New for SS27, Wild Country® Trekking Poles offer a feature-packed, great-value option for outdoor enthusiasts who want reliability and ease of use without stretching their budget. The launch range includes two models - Z-fold and telescopic, constructed from robust 7075 alloy, providing an excellent balance of strength and long-term durability. Quick-lock mechanisms ensure fast and intuitive adjustment, while the overall design philosophy echoes the Wild Country® tent range: accessible, dependable and built to perform.

Terra Nova® & Wild Country® Trekking Poles are fully compatible with tents featuring Trekking Pole Compatibility, offering additional pitching versatility when needed.

TERRA NOVA

NEW CARBON EDGE TREKKING POLES

CODE: TACETP001

FEATURES

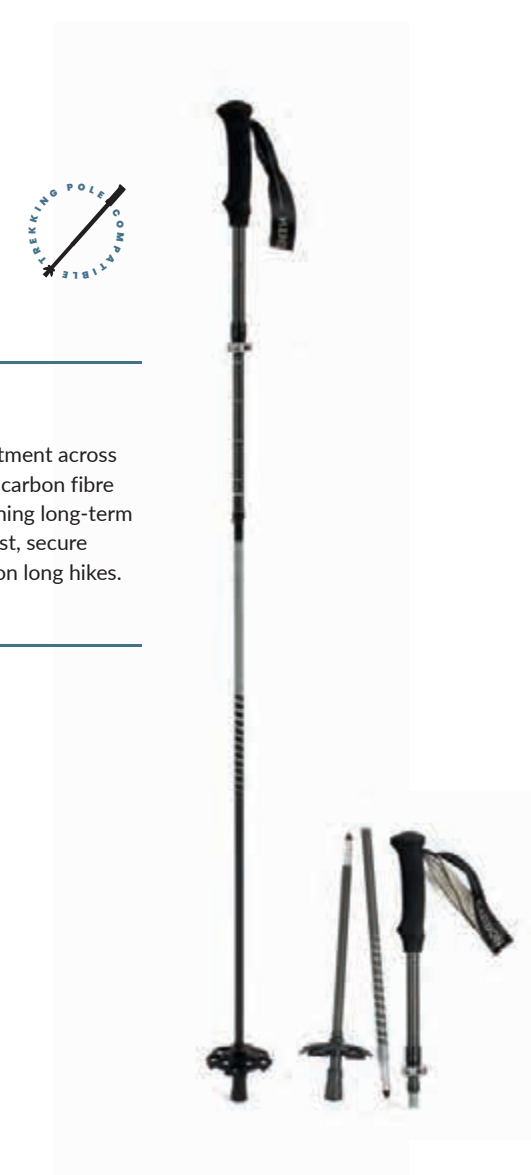

A fully telescopic trekking pole designed for easy adjustment across varied terrain and user heights. BIVI BAGS

Designed for minimalist nights outdoors where reliable protection and breathable comfort are essential, the Terra Nova® Bivi Bag range: the Survival Bivi, Jupiter Lite Bivi, and Moonlite Bivi, offers a compact, stormproof shelter option crafted with Terra Nova® proven waterproof technologies.

Each model features 10,000mm hydrostatic head fabrics, fully seam-sealed construction, and high levels of breathability, ensuring dependable performance. The Jupiter Lite Bivi, for example, uses Terra Nova® Moonlite upper fabric and a Waterbloc groundsheet to deliver both waterproof protection and enhanced comfort for extended use. Ideal for backpackers, mountain users and those seeking a lightweight emergency or standalone shelter alternative, all three Bivi Bags pair perfectly with Terra Nova® and Wild Country® Tarps, creating a versatile and adaptable shelter system for a wide range of outdoor scenarios.

BOTHY BAGS

Used by mountain leaders, rescue organisations, backcountry skiers and canoe guides worldwide, Terra Nova® Bothy Bags are trusted as essential lightweight emergency shelters that deliver rapid protection when conditions take a turn.

Their simple, user-supported design allows groups to create an immediate warm, dry microclimate - ideal for map reading, regrouping on exposed terrain, medical checks, or even lifting morale during wet lunch breaks. Constructed from lightweight, waterproof fabrics, featuring clear windows, mesh vents, durable waterproof seats, and roof sockets for walking pole support, they offer dependable shelter in a matter of seconds. To complement the standard models, Terra Nova® also offers a Superlite Bothy Bag option, designed for users who prioritise the smallest possible pack size and lowest weight, using streamlined silicone-coated fabrics to reduce bulk while retaining essential protection. Available in multiple capacities to suit individuals, small groups or larger teams, Terra Nova® Bothy Bags remain an indispensable component of safety kits for anyone venturing into unpredictable environments.

TERRA NOVA & WILD COUNTRY

TENT PEGS & ACCESSORIES

From ultralight racing setups to expedition-grade security, the Terra Nova® & Wild Country® Tent Pegs & Accessories range is engineered to support every style of adventure.

Spanning everything from featherweight 1g titanium skewer pegs designed for minimalist performance to 56g SOS (Sand or Snow) Stakes built for reliable anchoring in loose ground, winter conditions, or challenging terrain, the collection provides dependable pitching solutions for every environment. Alongside pegs, the category includes a full suite of accessories - replacement guylines and grippers, tent bags, footprints, and the innovative Terra Nova® PoleLock and PitchLite systems, offering enhanced stability, extended product life and increased pitching flexibility. With all components designed to work seamlessly across Terra Nova® and Wild Country® tents, this range ensures your shelter remains secure, adaptable and adventure-ready, wherever the trail leads.

TERRA NOVA

1g & 5.5g TITANIUM PEGS

CODE: 1g: TAT1S001 / 5.5g: TATS55001
